

Forord

Guide til at installere Virtual Environment

#	Lecture	Folder	Primary topics
1	Blood	blod	Diffusion, Flow, Hemoglobin Balance, Blood Pressure
2	Heart	hertet	Mechanical Cardiac Contraction, Action Potentials and ECG Physiology
3	Hemodynamics	hemodynamics	Vascular Compliance and Elasticity, Vascular Function Curve, Cardiac Function Curve, Steady

Du kan få alle lectures i dette kursus ved at køre følgende linje i din terminal:

Option 1: UV

```
uv run sync.py
```

Denne vil download alle github repos inden i den mappe hvor du har sync.py, samt installerer et virtuelt environment som har alt hvad du skal bruge i dette kursus.

Note: Denne funktion kræver at du har git og python installeret på din computer.

Option 2: Conda

```
conda create -n python314_st3_qhf python=3.14 -y
conda activate python314_st3_qhf
conda install --file requirements.txt -y
python sync.py
```

Option 3: python+pip

```
python -m venv python314_st3_qhf
python314_st3_qhf\Scripts\activate
python -m pip install --upgrade pip
python -m pip install -r requirements.txt
python sync.py
```

KOMPLET FORELÆSNINGSPLAN – ST3 Kvantitativ Fysiologi - Det Cardiovasculære system

Overblik over Cardiovasculær Modellings Forelæsningerne.

2	Heart	hertet	Mechanical Cardiac Contraction, Action Potentials and ECG Physiology
3	Hemodynamics	hemodynamics	Vascular Compliance and Elasticity, Vascular Function Curve, Cardiac Function Curve, Steady

Literatur Oversigt

Jeg elsker personligt gratis literatur. *Specielt når det er lovligt.*

Bøger

- [Think Python, 3rd Edition af Allen B. Downey \(online bog\)](#)
- [Python for Everybody af Charles Severance \(PDF\)](#)
- [Data Wrangling with Python \(eBook/PDF\)](#)
